

OBJECTIVE: Looking for a full time role as a Software Engineer

Hi,

I am a graduate student at Rutgers University, majoring in Computer Science. My anticipated graduation date is May 2017. I came across your listing and this opportunity is an excellent match for my qualifications.

I completed my Undergraduate in Information Science in 2013 from RV College, Bangalore. I started my professional career as a QA engineer at Novell(Micro Focus/Borland) working on the Asset Management module for Novell ZENWorks (enterprise management software). As I was interested to code, I got more involved with automation of test cases using framework based on Python. From initially just consuming the API's, I also started writing new API's which could be consumed later by other teams for their automation. I also created and maintained SMOKE setups for automatic validation of daily builds by creating a test environment and then executing end to end test cases written in Python.

This summer I worked at Sunbird Software as a software engineering intern and was mainly involved with automation of test cases based on REST API's. I was also involved with investigations on choosing the right tool/framework for FLEX UI automation and also extended the continuous integration process on JENKINS to include the SOAP UI test runs.

This Fall I worked as an software development intern at Enthsquare for a cloud computing solution, writing an application in Python's FLASK-RESTFUL framework and then creating a package in Python to consume the above application. This mainly would be used to automate creation, modification and other actions for virtual machines and volumes by the customer rather than doing it from a web interface.

All the above experiences combined with my academic experience has given me a solid foundation in Computer Science concepts and also taught me how the knowledge can be turned into something useful which can be consumed by end users.

I am willing to relocate for this role on my own expense. On the fun side, I love to ride motorcycles, play PC games, football, snooker and love outdoor photography.

Regards,
Raghav Pandya
